

# Omnigo Guard Tour

## GUARD TOUR SYSTEM

Monitoring numerous checkpoints can be a challenge. Ensure your security team checks the right places at the right time and can easily report on their findings.

### MITIGATE LIABILITY WITH SCHEDULED CHECK-INS

Limit risk of liability with an audit trail and historical proof-of-presence reports that automatically generate status of required, completed actions.

### PROTECT VULNERABLE ASSETS

Vulnerable assets, such as vaults, vital equipment, and specimen refrigerators create the need for regulated security checks. Verify check-ins and required tasks are completed and recorded within specified timeframes.

### INCREASE ACCOUNTABILITY & PRODUCTIVITY

Document incidents, non-compliance occurrences, completed tour actions, and upload digital media from the field with mobile integration that helps officers cover more area in less time. Offline capabilities allow tour completion in areas without network connectivity.

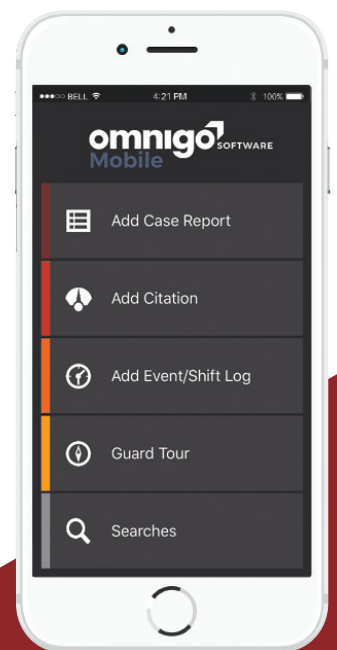

Improve efficiency, mitigate liability,  
and increase accountability with  
Omnigo Guard Tour

### TRACK SECURITY OFFICER ACTIVITY

Unique guard IDs and proof-of-presence technologies for Android/iOS mobile devices automatically note tasks completed at designated checkpoints by recording the time, date, and location and/or completing a custom, dynamic form. The system prompts officers to complete required, location-based actions and generates automatic entries into the **Omnigo Incident Reporting** platform.

### SCALE TO MEET YOUR NEEDS

Implement a cost-efficient, scalable solution capable of ensuring proof-of-presence reporting for both small-area sites with few checkpoints and large multi-branch environments with thousands of checkpoints across hundreds of sites.
