

Omnigo 911 Dispatch

COMPUTER-AIDED DISPATCH (CAD) SYSTEM

Reduce response times by streamlining and simplifying the 911 dispatch process with our comprehensive computer-aided dispatch (CAD) system.

STREAMLINE & SIMPLIFY PROCESSES

Provide dispatchers with the tools to accurately capture information and quickly transfer it to first responders. User-friendly software provides prompts for required information and instant access to reference lists and online help.

INCREASE SPEED & RELIABILITY

Ensure your ability to handle emergency calls with unparalleled speed and reliability. Our SaaS platform provides you with technology that's always secure and up to date at the lowest up-front cost.

EXPEDITE DISPATCH & RESPONSE

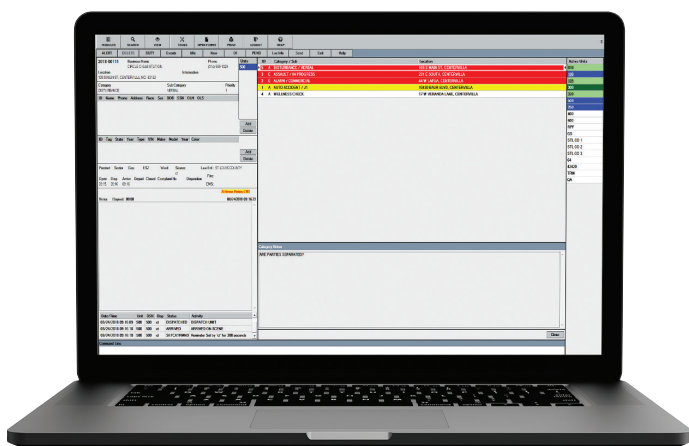

Quickly ascertain priority information and call status with an advanced graphical interface and multiple monitor support that enables operators to take swift and accurate action.

CUSTOMIZE FOR YOUR NEEDS

Reduce training and transition time by customizing the Omnigo system with your preferred terminology. Expand your dispatch center's capabilities by linking to popular Omnigo and federal, state, regional, and third-party systems, such as E911, Automatic Location (AVL), Mobile Computing (Silent Dispatch), Dispatch Map, NCIC, Medical Alert, and Records Management for fire and law enforcement.

PROVIDE REAL-TIME TRAINING

Set your operators up for success and your community up for safety. Provide dispatchers with the tools and training to accurately report and convey emergency information to responders in the field. Omnigo's real-time "side-along" training allows dispatchers to fully experience the software without being on live calls.

Better connect 911 dispatchers
to first responders
in the field
