

# Improve Efficiency and Increase Accountability with **OMNIGO** **GUARD TOUR**

Keeping track of patrols and inspections can be a challenge. Ensure your team is checking the right places and collecting the right information, at the right time. Guard Tour allows users to report on their findings and provide a digital record of activities.

## **INCREASE ACCOUNTABILITY AND PRODUCTIVITY**

Document incidents, noncompliance occurrences, completed tour actions, and upload digital media from the field with mobile integration that helps officers cover more area in less time. Offline capabilities allow tour completion in areas without network capability.

## PROTECT YOUR VULNERABLE ASSETS

Vulnerable assets, such as vaults, vital equipment, fire extinguishers, and specimen refrigerators create the need for regulated security checks. Verify check-ins and required tasks are completed and recorded within specified timeframes.

## MITIGATE LIABILITY WITH SCHEDULED CHECK-INS

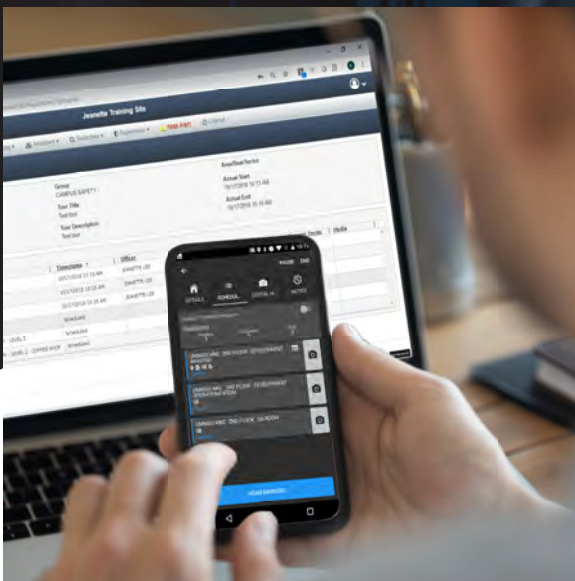

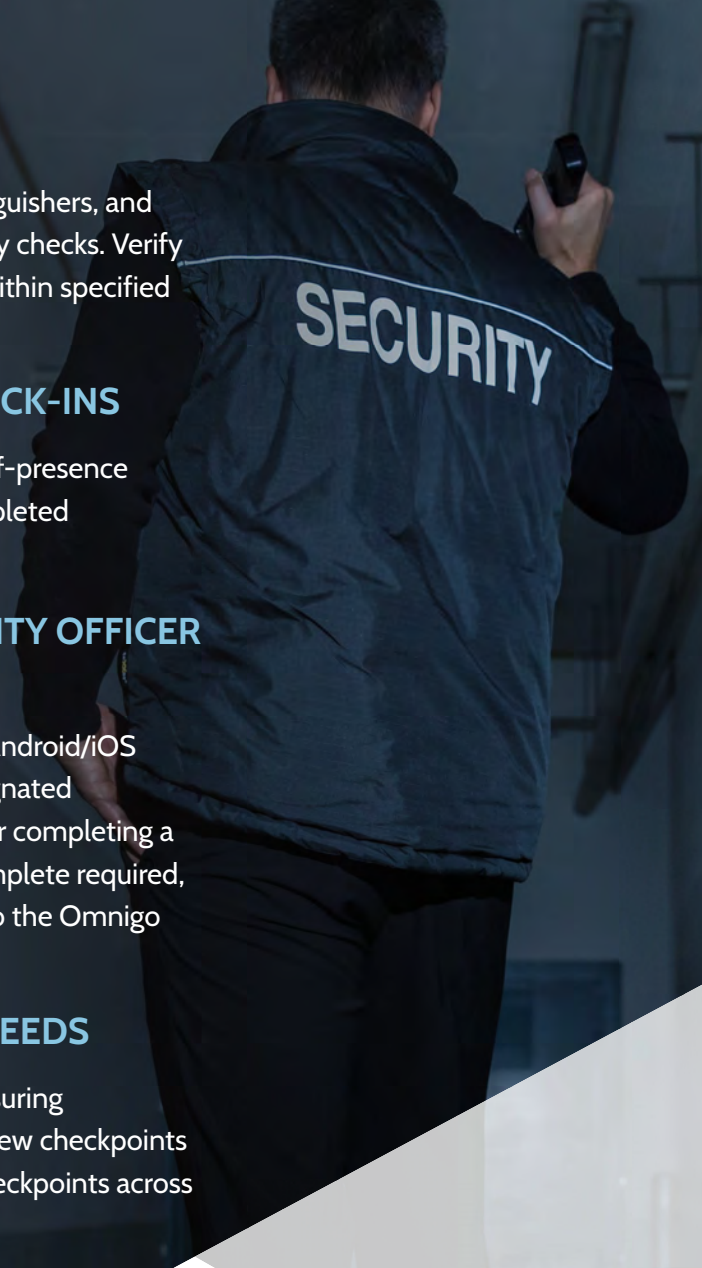

Limit risk of liability with an audit trail and historical proof-of-presence reports that automatically generate status of required, completed actions.

## IMPROVE EFFICIENCY BY TRACKING SECURITY OFFICER ACTIVITY

Unique guard IDs and proof-of-presence technologies for Android/iOS mobile devices automatically note tasks completed at designated checkpoints by recording the time, date, and location and/or completing a custom, dynamic form. The system prompts officers to complete required, location-based actions and generates automatic entries into the Omnigo Daily Log.

## CUSTOMIZE THE SYSTEM TO MEET YOUR NEEDS

Implement a cost-efficient, scalable solution capable of ensuring proof-of-presence reporting for both small-area sites with few checkpoints and large multi-branch environments with thousands of checkpoints across hundreds of sites.
