

# DIGITAL EVIDENCE MANAGEMENT

FOR COURT SYSTEMS

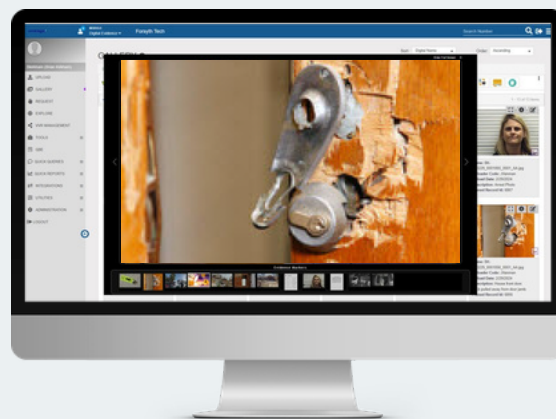

## DIGITAL EVIDENCE MANAGEMENT

Accelerate the movement of digital evidence in your courtroom using a cloud software platform that securely manages all evidence through submission, receipt, presentation, and disposal.

### EASILY RECEIVE AND SECURELY SHARE EVIDENCE

Make every step of handling digital evidence easier and more secure—streamlining uploads from external parties, safeguarding sensitive files, and enabling judges, clerks, and litigants to access and share exhibits with confidence.

#### EASILY RECEIVE

Remove the burdensome process of receiving digital evidence on physical devices by directing external parties such as attorneys and litigants to your custom court portal for remote uploading of all file types.

#### SECURELY ACCESS

Define exactly who can view evidence remotely, while giving administrators full oversight to review, manage, and protect sensitive files by marking them as restricted or confidential.

#### SIMPLY SHARE

External parties, clerks, and judges can share evidence with other parties in a virtual viewing room that uses dual-authentication security and timebound limitations.

## EFFICIENTLY MANAGE EVIDENCE

Manage every exhibit faster and easier by quickly locating files, organizing case materials, and reviewing activity history—giving courts the efficiency and accuracy they need to keep proceedings moving.

### FIND EVIDENCE FAST

Quickly locate the right evidence using case details such as department, hearing date, or citation number—or instantly search within large documents, audio, and video using OCR and transcription capabilities.

### STAY ORGANIZED

Keep every case streamlined with subfolders for each party and an explore view that displays all folders at a glance, complete with a running count of every digital exhibit—making it easier for clerks, judges, and attorneys to stay organized and quickly assess the full scope of case materials.

### AUDIT WITH EASE

Easily inspect the history of evidence with one click viewing of metadata showing all operations performed including uploads, views, shares, and updates by individual and date/time.

## CONFIDENTLY PRESENT EVIDENCE

Present evidence with confidence and certainty—navigating, annotating, and controlling each displayed item with precision—so every detail is clear, admissible, and trusted by the court.

### CONFIDENTLY NAVIGATE

Expertly control the display of evidence from and to a variety of local or remote display devices, including enlarging images, playing video, or paging through documents - previewing each using the film strip feature.

### EMPHASIZE KEY EVIDENCE

Strengthen presentations by adding real-time annotations—such as circling a suspect's face in a photo—so judges and jurors can quickly grasp important details while the system preserves both the original and annotated versions.

### PROTECT THE PROCESS

Safeguard the integrity of court proceedings by ensuring only officially admitted evidence is presented, preventing the risk of confusion, bias, or mistrial from displaying unapproved items.

# AUTOMATE EVIDENCE RETURN AND DISPOSAL

Automate the return and disposal of uploaded evidence by automatically notifying submitting parties and utilizing workflows to take action per court stipulations and retention policies.

## START INSTANTLY

With a one mouse click, a court-authorized user can mark a case as Completed and start an automated workflow that sends a disposal date email alert to all parties with uploaded evidence.

## AUTOMATICALLY ALERT

Exhibit Custodians receive automatic alerts for cases requiring further review with the option to accept or reject disposal, returning evidence to the clerk with reasons selected from a customizable drop-down list.

## MANAGE IN REAL-TIME

Personnel time and data resources can be efficiently managed using standard and custom real-time statistical reports including Total Uploaded Exhibits, Total Exhibits Purged, and Purged Cases by Case Type.
