JAIL MANAGEMENT SYSTEM

Standardize, Centralize, and Take Control

Bring every stage of jail management into one connected system—from intake and housing to release and reporting. Create a single source of truth that improves accuracy, increases efficiency, enhances visibility, and helps your team operate with confidence.

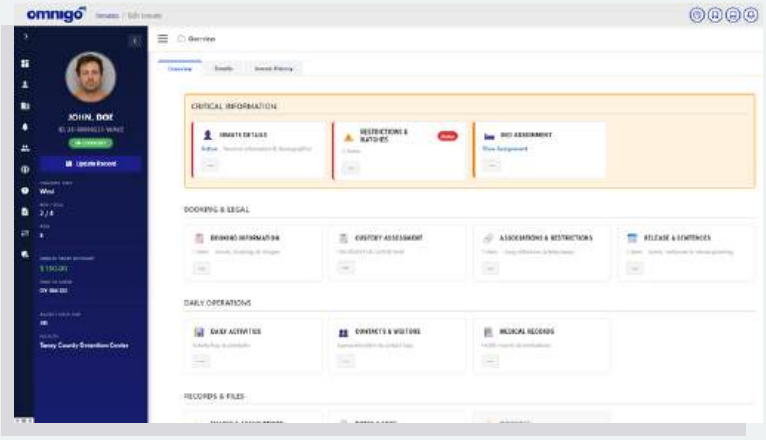

Fast, Accurate Intake Right from the Start

Inmate intake sets the foundation for everything that follows. Guide staff through a structured, step-by-step intake workflow that helps ensure required fields are completed, which reduces errors and eliminates delays. From physical descriptions and arrest details to property collection and booking information, every record is complete, consistent, and ready for downstream processes.

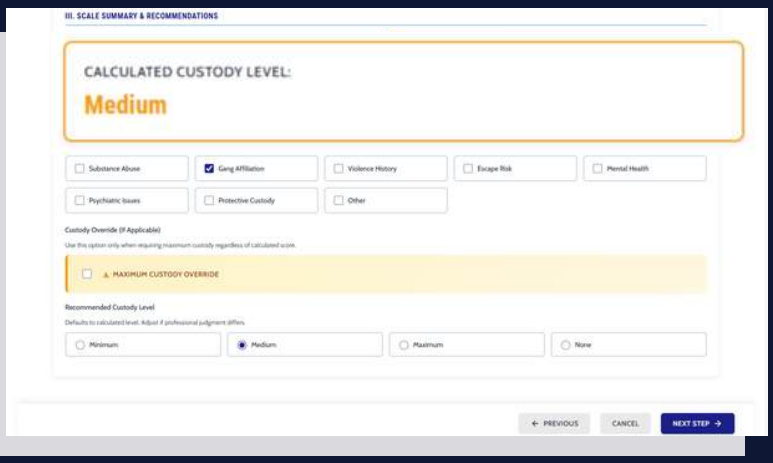

Keep All Inmate Information in One Place

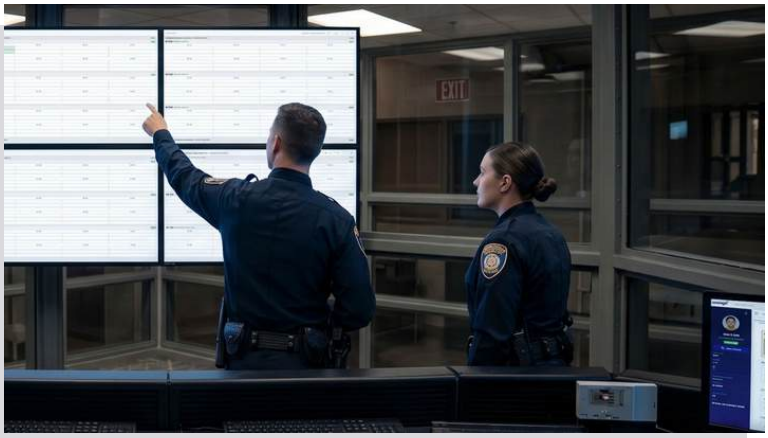

Access a complete, real-time inmate record from a single jail management software platform, including intake details, housing history, alerts, medical and activity records, and release information. Advanced search tools help staff find critical information quickly so they can make informed decisions without delay.

Assign the Right Inmate to the Right Place Every Time

Make housing decisions with confidence using standardized classification and real-time visibility. Assessment scoring and cell assignment tools help staff place inmates based on risk, separation requirements, medical needs, and facility rules, reducing conflicts and improving safety across your jail.

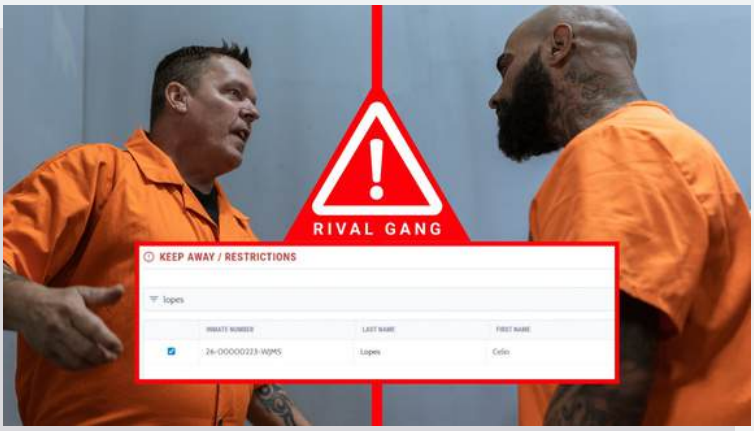

See and Manage Your Entire Facility in Real Time

Mirror your real-world jail structure digitally with configurable buildings, pods, and cells. An interactive housing board and real-time dashboards give staff instant visibility into inmate locations, capacity, and movement, making it easier to assign, transfer, and monitor inmates throughout the facility.

Prevent Conflicts Before They Happen

Increase safety with automated keep-away alerts and real-time visual indicators for high-risk inmates. Whether it is separation requirements, medical alerts, behavioral concerns, or suicide watch, staff are notified immediately so they can help prevent incidents and respond faster.

Stay Compliant with Confidence

Support compliance with automated reporting, configurable workflows, and complete audit trails. From housing history to inmate movement and release records, every action is tracked, documented, and ready for review, helping your facility reduce manual effort and lower risk.

Manage Inmate Activities and Care with Precision

Track inmate movement across court dates, medical visits, programs, work release, and other scheduled activities with a centralized system. Medication management tools help staff document dosages, dispensing details, and related records accurately, supporting both inmate care and operational compliance.

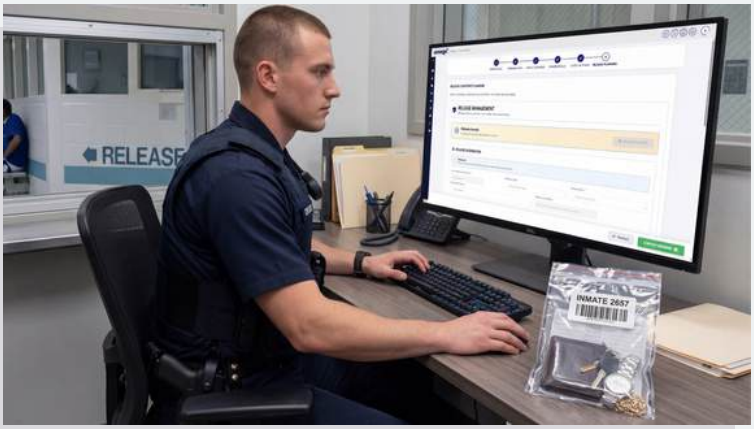

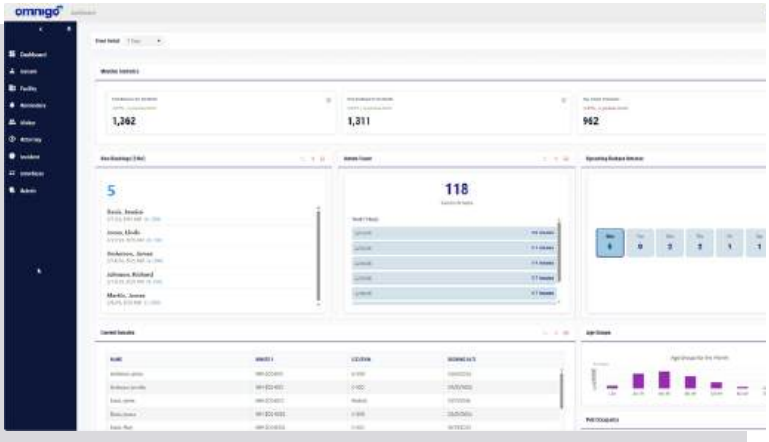

Streamline Daily Jail Operations

Simplify commissary and inventory management with tools that track quantities, pricing, and expiration dates in one place. Generate reports quickly, maintain tighter operational control, improve purchasing decisions, and reduce the burden of manual tracking across your facility.

Ensure Accurate Release Dates and Processes

Reduce the risk of over-detention or under-detention with automated sentence calculations and guided release workflows. The system tracks time served, including work release and other qualifying activities, to help ensure every release is accurate, compliant, and fully documented.

Turn Jail Data into Actionable Insight

Use real-time dashboards and statistical reporting to understand population trends, monitor housing activity, improve staffing decisions, and support operational planning. With up-to-date jail data always available, your team can move faster and make better-informed decisions.
